Project Design Phase-II

Technology Stack (Architecture & Stack)

Date: 03 October 2022

Team ID: PNT2022TMID52462

Project Name Project: Real-Time Communication System Powered by AI for Specially-Abled
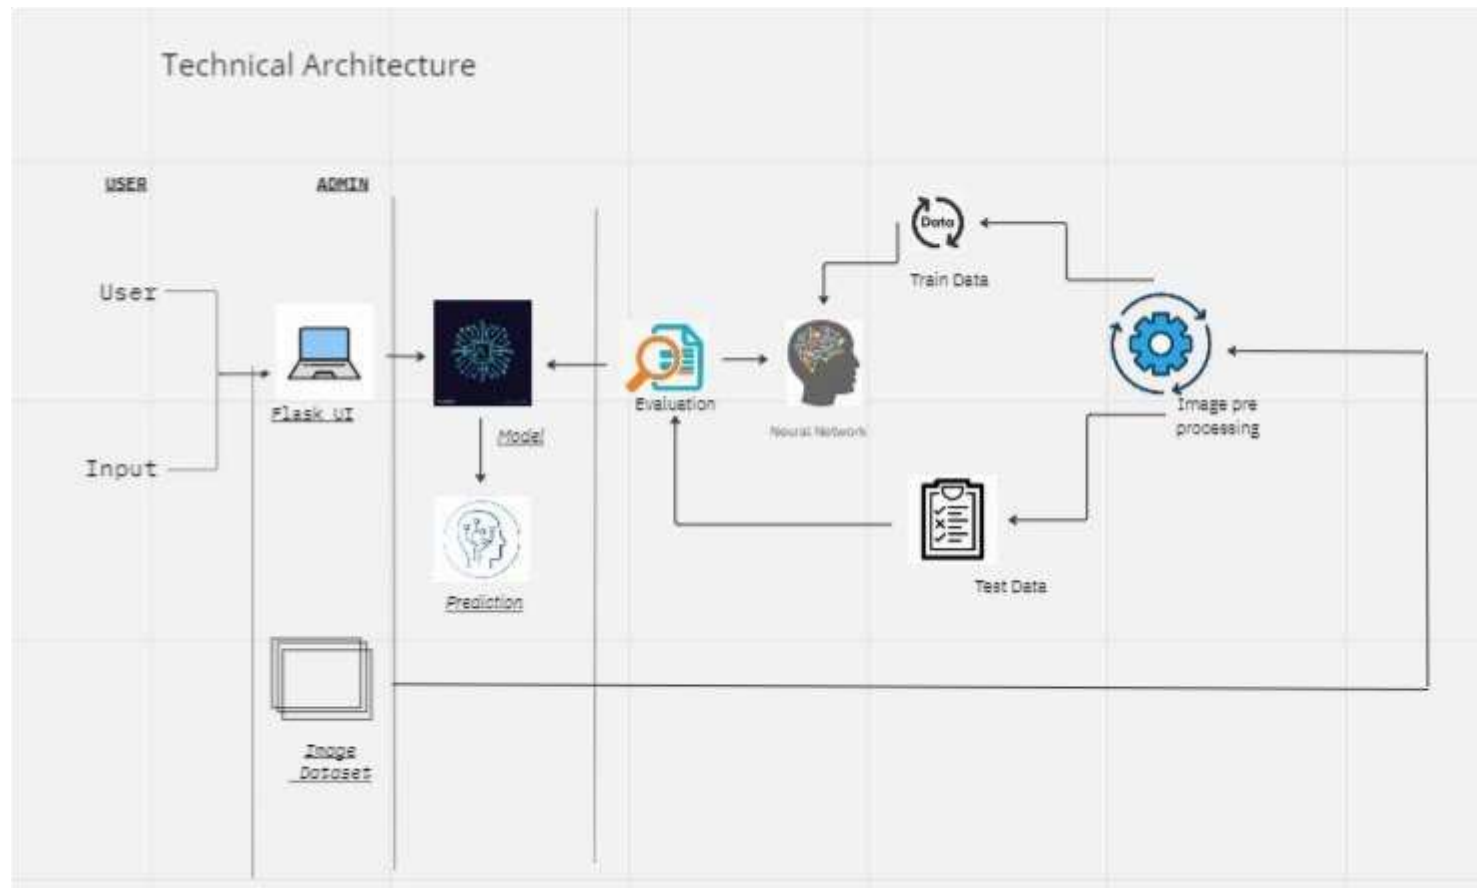

Maximum Marks: 4 Marks

Technical Architecture

Table-1 : Components & Technologies:

S.No	Component	Description	Technology

1.	User Interface	The user interface is the point of human computer interaction and communication in device.	HTML, CSS, JavaScript / Angular Js / React Js etc.
2.	flask UI	Flash's user interface components let you interact with the users that use your site and gather information.	Using the cloud, it can be executed.
3.	Models	Support Vector Machine (SVM) is subsequently applied to classify our gesture image dataset.	machine learning
4.	Image	Image processing is used to extract signs from the image using neural network.	ANN, CNN, Open CV.
5.	Evaluate Data	Aims to estimate the generalization accuracy of a model on future (unseen/out-of-sample) data.	Nlp
6.	UnStructured Data	Unstructured data is a conglomeration of many varied types of data that are stored in their native formats.	Natural language prgramming
7.	structured Data	Typically categorized as quantitative data is highly organized and easily decipherable by machine learning algorithms	Machine language and artificial intelligence tools
8.	File storage	File storage requirements to store the trained model in order to use it whenever it is needed.	IBM Block Storage or Cloud object.
9.	ML device	Provides a full range of tools and services so that you can build, train, and deploy Machine Learning models.	Python, IBM Watson
10.	IBM Cloud	IBM Watson Studio empowers data scientists, developers and analysts to build, run and manage AI models, and optimize decisions anywhere on IBM Cloud Pak for Data	IBM Cloud and Watson Studio service
11.	Dataset	: First prototype of this system used a dataset of 24 static signs from the Panamanian Manual Alphabet.	AI technology.

Table-2: Application Characteristicsz:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	an open source framework is a template for software developement that is designed by a social networks of software developers.	TensorFlow.
S.No	Characteristics	Description	Technology
2.	Security Implementations	It operates the largest national network of professional monitoring centres & offers a six-month, money-back guarantee to the customers.	ADT type of coding.
3.	Scalable Architecture	Three-tier architecture is a well-established software application architecture that organizes applications into three logical and physical computing tiers: the data tier, the presentation tier and the application tier.	3-tier
4.	Availability	The system will be made Ubiquitous so that it is available anywhere	WEB applications
5.	Performance	The model will be fine-tuned to strike a balance between accuracy and performance.	optimization of code and train model
